

Abstract of the Disclosure

A cutter 10 having a support member 12, a handle member 30 which is movably coupled to the support member 12, and a pair of cutting members 38 39, 40 which are attached to the handle member 30. The cutter 10 includes a support member 20 which receives a metal stud member 24. The cutting members 38 39, 40 selectively and cooperatively cut or sever the operatively and stationarily received metal stud member 24 when the handle member 30 is moved to a closed position.
